

Listing of the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (currently amended) A halogen incandescent lamp comprising a transparent sealed bulb (2), a gas filling comprising an inert gas and a halogen additive, a luminous element (4) which is attached to a current supply system (7, 8, 9) extending in a pinched portion (3) of the bulb, and a mount (5, 9, 10, 11, 12, 13) extending from at least adjacent the outside of the pinched portion (3) into the bulb (2) and comprising at least one metal support wire (5) which retains the luminous element (4) in the vicinity of the end of the bulb (2) remote from the pinched portion (3), characterized in that the mount (5, 9, 10, 11, 12, 13) comprises a non-conducting part (9, 10; 12) such that the outer end of ~~of the part~~ (11; 12) of the mount (5, 9, 10, 11, 12, 13) at or near the outside of the pinched portion (3) and the support wire (5) are electrically insulated from each other.

2. (original) A lamp according to claim 1, characterized in that the non-conducting part comprises a pedestal (9, 10) which is supported by the bulb (2) or the pinched portion (3) thereof, and that the at least one metal support wire (5) extends from the pedestal (9, 10).

3. (currently amended) A lamp according to claim 2, characterized in that the pedestal (9, 10) extends at least partly in the pinched portion (3).

Amendment/Response

Reply to non-Final Office action of 25 January 2007

4. (original) A lamp according to claim 3, characterized in that the pedestal comprises a capillary (9) substantially extending in the pinched portion (3) and a bead (10) substantially extending inside the bulb (2).

5. (previously presented) A lamp according to claim 2, characterized in that the pedestal (9, 10) is substantially made of glass.

6. (previously presented) A lamp according to claim 2, characterized in that the bulb is made of a quartz glass and the pedestal is made of a quartz transition glass.

7. (previously presented) A lamp according to claim 2, characterized in that the mount comprises two, three or more metal support (5) wires extending from the pedestal (9, 10).

8. (original) A lamp according to claim 1, characterized in that the non-conducting part comprises a bead (12), preferably made of glass, more preferably made of a copper-based glass, which is applied to the outside of the pinched portion (3).

9. (currently amended) A method of manufacturing a ~~lamp~~ halogen incandescent lamp, the lamp comprising a transparent sealed bulb (2), a gas filling comprising an inert gas and a halogen additive, a luminous element (4) which is attached to a current supply system (7, 8, 9) extending in a pinched portion (3) of the bulb, and a mount (5, 9, 10, 11, 12, 13) extending from at least adjacent the outside of the pinched portion (3) into the bulb (2) and comprising at least one metal support wire (5) which retains the luminous element (4) in the vicinity of the end of the bulb (2) remote from the pinched portion (3),

Amendment/Response

Reply to non-Final Office action of 25 January 2007

the mount (5, 9, 10, 11, 12, 13) comprising a non-conducting part (9, 10; 12) such that the outer end (11; 12) of the mount (5, 9, 10, 11, 12, 13) at or near the outside of the pinched portion (3) and the support wire (5) are electrically insulated from each other, and the non-conducting part comprising a bead (12)

according to claim 8, -the method comprising the step of applying the bead to the outside of the pinched portion (3), characterized in that the part of the mount (5, 11, 13) which extends outside the pinched portion (3) is substantially removed before the bead (12) is applied.

10. (currently amended) A method of manufacturing a lamp according to claim ~~8~~9, characterized in that the bead (12) is heated by IR radiation in order to apply the bead (12).
